

Percobaan 3 : Implementasi bilangan Fibonacci dengan rekursi

```
#include <stdio.h>
```

```
int Fibonacci(int);
```

```
void main()
```

```
{  
    int n=7;
```

```
    for (int i=1; i<=n; i++)  
        printf("%d, ",Fibonacci(i));
```

```
}
```

```
int Fibonacci(int n)
```

```
{  
    if (n<=2)  
        return n;
```

```
    else  
        return(Fibonacci(n-2)+Fibonacci(n-1));
```

```
}
```
